# OLUSANYA TIMOTHY

AI Safety & Security Research | Empirical Evaluation, Red Teaming, Agentic Systems

Lagos, Nigeria (UTC+1) | olusanyatimothy54@gmail.com | github.com/Teamthy | linkedin.com/in/olusanya-timothy

## SUMMARY

Engineer who builds adversarial test infrastructure for LLM and agentic systems and treats reproducibility as the deliverable. Published an open-source harness that runs five failure checks against any OpenAI-compatible model, and a public series documenting failure modes in shipped AI with the exact inputs and the controls that catch them. Every result traces to a prompt, a model version and a commit, with the sample size beside each rate.

## RESEARCH INTERESTS

AI security: prompt injection, tool-description and retrieval poisoning, agentic tool abuse. Adversarial robustness and AI control: whether a scaffold-level check catches what a model-level refusal misses. Measurement: failure rates with sample sizes, negative controls, and re-runs across model versions.

## SELECTED RESEARCH ARTIFACTS

- ai-redteam-five-tests (open source, Python): runnable harness that runs five reproducible checks against any OpenAI-compatible model, covering prompt injection, poisoned retrieval, tool-description injection, multilingual refusal and failure-rate reporting. Writes raw responses and counts out so a finding is re-derivable by someone who was not in the room.
- Breaking AI (public, 21-part series, first two published October 2026): reproducible failure modes in shipped AI features, with the exact test inputs and the fixes that stop them. Article 2 ships the scripts, prompts, poisoned document and tool schema alongside the write-up.
- Chatbot pre-launch red team: built an LLM support bot with its system prompt and tool wiring, ran six injection tests and four broke it (system prompt leak, an unauthorized refund commitment, a content policy bypass). Shipped the fixes and turned each finding into a reusable test.

## TECHNICAL SKILLS

Languages: Python (primary), Go, TypeScript, JavaScript, SQL

AI / LLM: LLM APIs, tool calling, retrieval pipelines, evaluation harnesses, prompt-injection testing, model evaluation, NIST AI RMF

Research methods: instrumented experiments, reproducible evaluation, negative controls, failure-rate reporting with sample sizes

Backend and data: REST APIs, Node.js, NestJS, JWT and RBAC, PostgreSQL, MongoDB, Docker, Git

## EXPERIENCE

**Software Engineer, AI Integration & Red Teaming | Teamart.inc**

Lagos, Nigeria | July 2025 to present

- Build and ship LLM features for client products: chatbots, retrieval pipelines, tool-calling workflows.
- Run pre-launch red teaming, including prompt injection, unauthorized tool calls and policy bypass, and deliver prioritized findings with fixes.

**Senior Developer | YKAY ConsultingHub**

Lagos, Nigeria | November 2024 to June 2025

- Led backend development in Go and Node.js across client-facing products; designed REST APIs and multi-role authentication with JWT and RBAC.

## CODE AND WRITING

Harness: github.com/Teamthy/ai-redteam-five-tests

Series: linkedin.com/pulse/five-boring-failures-ship-your-ai-feature-olusanya-timothy-pl4oe

Profile: github.com/Teamthy

## EDUCATION AND CERTIFICATIONS

- BSc Computer Science, National Open University of Nigeria, expected April 2028 (distance study alongside full-time work).
- Previous study: Medical Laboratory Science. Coursework and training: NIST AI Bootcamp (AI Risk and Safety Frameworks).
