NVIDIA'S BOARD SAID ON SUNDAY IT HAD CONFIDENCE IN ITS CHIEF EXECUTIVE.

READABLE RECORD

NOW LOOK AT WHAT CHANGED BETWEEN SUNDAY AND THURSDAY.

The board did not discover a new standard of conduct. It had already opened an investigation and hired a law firm. Then a second report landed, the board met on Wednesday night, and it had his resignation by morning.

SO THE STANDARD WAS NEVER THE BINDING CONSTRAINT.

Readership was. An intelligence assessment, a newsroom, a wire service, then a second wire report: each one put material in front of people who did not work for Nvidia and could act on it.

I TEST SYSTEMS FOR A LIVING, AND THIS IS THE FAILURE I LOOK FOR.

Not whether a standard exists, or whether an investigation was opened, but whether anyone outside the process can obtain the evidence and do something with it. A control only its owner can invoke is a preference with a filing cabinet.

ON STATUS, BECAUSE IT MATTERS: THE RESIGNATION, THE APPOINTMENT AND THE SHARE MOVE ARE FACTS.

The conduct behind them is reported, and part of it he acknowledged to staff. Whether any information was compromised has not been established by anyone. A governance post that blurs that line is committing the failure it describes.
